Subject: FW: PFAS testing in biosolids
Attachments: Use and disposal 2019.xlsx

Hi Annalisa and Wendy – thanks for your updates today on PFAS testing in POTW influent, effluent, and biosolids. EPA Region 9 has reports from major POTWs on what they did with their biosolids in 2019, and if you don't have this information from other sources, I'm attaching a table of how each major POTW used or disposed their biosolids in 2019 – in most cases they probably are doing the same in 2020. (This database also has biosolids information for other states/territories in Region 9, so sort for NPDES #'s starting with CA for California data).

Over one-third of the biosolids generated in California were composted along with greenwaste and other bulking agents. Do you know if CalRecycle is requiring testing of PFAS for compost products, or do you have a plan for testing compost?

Thanks,

Lauren
